NAME

MARC::Charset::Hebrew - MARC8/UTF8 mappings for Hebrew

SYNOPSIS

```
use MARC::Charset::Hebrew;  
my $cs = MARC::Charset::Hebrew->new();
```

DESCRIPTION

MARC::Charset::Hebrew provides a mapping between the MARC8 Hebrew character set and Unicode(UTF8). It is typically used by MARC::Charset, so you probably don't need to use this yourself. It inherits from MARC::Charset::Generic so look at those docs to see all the methods that are available.

METHODS

The constructor, which will return you a MARC::Charset::Hebrew object.

lookup()

The workhorse method that does the lookup. Pass it an a character and you'll get back the UTF8 character.

combining()

Pass it a character and you'll get back a true value (1) if the character is a combining character, and false (undef) if it is not.

TODO

Are some of these combining characters?

SEE ALSO
